

T8(001)_20220425

This release provides security and stability improvements, performance improvements, driver updates to accommodate 2nd source components for extended availability, and the April SPL from Google.

This is a large update, distributed as a FULL OTA to avoid any potential issues due to bundled driver updates and system changes. It is recommended this is distributed over Wi-Fi (and is set to do so for 21 days through typical OTA policies, EMM policies may adjust this).

Build date: Apr 25th, 2022

Build type: Security Maintenance Release (SMR)

Security patch level: [Apr 05](#)

Build version: T8(001)_20220425
